Warm White Art no.: 34000

Fig.1

All installations must comply with guidelines which are based on a zonal concept Fig.1. This concept must be followed to ensure the safe installation. These regulations apply to domestic installations only. Installations must be made in accordance with the current IEE wiring regulations and relevant building regulations.

Thank you for purchasing this HiB product. **We recommend that all electrical bathroom products should only be fitted by a suitably qualified, Part P registered electrician.**

Suitable for installation in zones: 2 & outside zones

Components

- 1x Fascia.
- 1x LED Driver - (for illuminated products only)
- 1x High powered Inline Fan
- 1x 3 metre flexible ducting
- 1x White external fixed grille
- 4x Galvanized steel hose clamps
- 1x Screw and dowels pack
- 1x Plastic Screwdriver
- 1x Fitting instructions
- 1x Foam strip.

Electrical safety information- Ensure mains power supply is switched off before starting installation. Before drilling, ensure there are no hidden cables or pipes in the wall. The Turbo illuminated Inline Fans are supplied with a 5 Watt LED Lamp. DO NOT replace with any other lamp as this will invalidate any warranty. DO NOT exceed the stated wattage.

Please note:

Once the fan is powered this may turn on straight away. This is because the fan has a capacitor and holds an initial charge.

Mounting Fascia

1. The ventilation should be ducted through the roof space, ducting to an external soffit under the eaves or grille in the slope of your roof. **Ducting can only run between joists, not across them.**
2. Mark the position of the fascia with a pencil in a suitable position on the ceiling, making sure that it is between joists.
3. Drill a 9mm hole through the ceiling along the edge of the pencil line. Now cut out the hole with a pad saw.
4. Hold the fascia against the ceiling and mark the position of the fixing holes, fix the unit in place using suitable fixings- (not supplied)
5. Attach the flexible ducting with the metal hose clamps. **Ensure the ducting has a smooth flow towards the motor body. Follow a similar procedure for the outside wall grille.** Extra ducting may be used to extend the distance to the external grille but the performance will be reduced.

Mounting Fan Unit

Install the Turbo Inline fan within the loft or ceiling space, **DO NOT COVER** the motor or LED driver with loft insulation. The fan is only suitable for **horizontal mounting** on a wall or floor. Follow the visual aids below to mount the Fan unit.

fig. A horizontal on a wall

fig. B horizontal on a floor

Do not mount duct or motor vertically

Do not run the ducting over the joists, this will cause a build of condensation and reduce the extraction rate. Ensure the ducting is run between joists to create smooth airflow.

Electrical Connection

Ensure the mains power supply to which the fan is being connected to is turned off. This product is designed to be connected to an on/off switch outside the bathroom, or to a ceiling mounted pull cord switch.

Timer System

The timer circuit is under mains Voltage. Ensure mains power supply is switched off before making any adjustments.

The fan is operated by turning on the wall switch. When the switch is turned off the fan will continue to operate within the set period of time. Adjustable between 2-30mins. This can be adjusted by turning the potentiometer T clockwise to increase and anticlockwise to decrease the run time.

ONLY use the screwdriver provided to adjust the timer setting.

Wiring diagram for lamp

Cool White and Warm White illuminated fans.

Maintenance

Fan maintenance is to be performed only after the fan is disconnected from the mains power supply. This includes periodic cleaning of the surface of dust and dirt.

All surfaces should be cleaned with a diluted detergent and a soft cloth. Avoid water dripping on the electric components. Wipe the surfaces dry after cleaning.

Aftercare service - In the unlikely event that this product should fail, please contact HiB customer services. The details are shown below.

WEEE compliance
Must not be mixed with
general household
waste
